

### Features

- Frequency up to 2 GHz
- Low Phase Noise
- Modulation Input available

### Applications

- Base Stations
- Analog and Digital Radio
- Instrumentation

### Description

The RQC-type is a general purpose VCO. Components are selected for high-Q and tight tolerances.

### Mechanical Specification

### Electrical Specification

PARAMETER	COMMENTS, EXAMPLES	SYMBOL	MIN	TYP	MAX	UNIT
Max Frequency	Currently available in RQR-package	fo			2000	MHz
Tuning Ratio	Ratio of upper-to-lower freq (2 = "Octave-VCO")	f-up : f-low		1.1	1.5	-
Tuning Voltage	Battery operated 2V, Stationary: 5V or higher	Vt	0~2	0~5	0~25	V
Supply Voltage	Battery operated 3.3V to 5V, Stationary up to 12V	Vcc	3.3	5	12	V
Supply Current	Dependent on Frequency and Output Power	Icc	10	20	30	mA
Output Power	Output Power Tolerance is typ. ±3dB (min. ±1dB)	Pout	-3	+3	+10	dBm
Harmonic Suppression	Dependent on Tuning Range and Freq	a(2fo)		-20		dBc
Pushing	Dependent on Freq, Tuning R., typ 0.1%~0.5% fo	df/dVcc		1		MHz/V
Pulling	Dependent on Freq, Output Power and Circuit.	df/dZL		3		MHz

### General Specification

1. Load Impedance is 50 Ohms.
2. Operating temperature range is typically -40°C...+85°C.
3. The package is non-hermetic. Substrate is glass-reinforced laminate, cover is folded nickel-silver.
4. Bypass-capacitors (ceramic) from Vcc to Ground are recommended: 1nF||100pF.
5. Customized specifications may deviate from this General Specification.
6. Phase-noise performance depends on the individual specification. Phase Noise is strongly dependent on (a) frequency (b) supply voltage and (c) tuning range.
7. The phase noise graph (to right) shows the characteristic of 2 typical RQC-VCOs. Samples are measured at 5V supply and have 3dBm output power and ±1% tuning range.

### Phase Noise
